

# CYBERSABER

## Design Thinking Project 2026

1

USER / PROTAGONIST

Aryan Mehta

20 · Engg/Law Undergrad · Urban India · Tech: High

"I'm careful online — but when something happens, I have no idea where to go."

▸ Navigate platforms safely

▸ Protect family from scams

▸ Know how to report cybercrime

Awika Singh

18–22 · Student · Urban India · Tech: High

"I just deleted the post — I didn't know there was something I could report."

▸ Express freely without harassment

▸ Shop safely on social commerce

▸ Understand cyberbullying & legal options

Reena Sharma

48–58 · Homemaker · Urban India · Tech: Medium

"We filed a complaint, but the money was gone. I avoid online transactions now."

▸ Complete digital transactions safely

▸ Recognize scam red flags independently

▸ Not rely on children for every step

2

CONTEXT & SITUATION

📍 Setting

Urban India · students, young adults & homemakers · heavy daily use of Instagram, WhatsApp & UPI · informal social commerce (no payment safety net)

⚡ Triggers

Fake bank/authority calls · advance-payment Instagram scams · phishing links · body-shaming comments · fake profiles · "digital arrest" manipulations on elderly

🕒 Response Gap

Most victims deleted/ignored rather than reported · didn't know how to file a complaint · reporting felt too complex or futile · police rarely acted on small cases

📖 Awareness Gap

Schools teach theory, not practice · cybercrime portal unknown to most · elderly & rural users most exposed · families rely on younger members for every decision

3

EVIDENCE BASE

📁 VBIT Case · Telangana 2022–23

Women engg. students harassed via WhatsApp/Instagram — morphed photos & threats to leak explicit content. 4 accused arrested within days of FIR.

📁 Renu Desai · Hyderabad 2025

Actress targeted by 4 coordinated accounts — vulgar abuse & false propaganda. Cyberabad Cybercrime Police: 2 arrested under IT Act + IPC.

📁 Shanaya Khan · Hyderabad

14-yr-old bullied with sexualised comments on a birthday photo. Continued after post deleted. Needed counselling; never formally reported.

📊 UN Report 2025 · 30,000+ Children Surveyed

66% say cyberbullying is rising

82% don't report — fear of stigma

AI deepfakes creating new threat vectors

Reputational harm spreads in seconds

🏛️ Legal Framework (India)

IT Act: Sec 67 (obscene content) · Sec 67A (explicit material)

IPC/BNS: Sec 499 (defamation) · Sec 354D (cyberstalking)

BNS 2023 replaced IPC from July 2024

4

PAIN POINTS & NEEDS

👤 Aryan Mehta

📖 No escalation path — knows red flags but not next steps

📍 Report button buried deep in settings; no in-context guidance

📞 Zero confirmation, ticket ID or status update after reporting

📠 No helpline exists; cybercrime portal unknown until much later

👤 Awika Singh

❓ Doesn't know body-shaming qualifies as cyberbullying or is reportable

😬 Fears reporting will escalate, not resolve the situation

🚫 Copes only through avoidance; self-censors to reduce risk

👤 Reena Sharma

📖 No simple, trusted digital safety guide suited for 45+ users

📞 No real-time vishing alert from bank; scam call felt completely official

🏠 Filed FIR but money never returned — systemic failure of redress

😬 Residual fear — avoids digital transactions altogether now

5

ROOT CAUSES (5 WHYS)

Core: No trusted path to protection or recovery

🔴 L1 — Main Branches: Reporting buried, no status, systems siloed, users excluded

🟠 L2 — Immediate Causes: Report button 3+ menus deep, no ticket ID, no shared fraud signal

🔵 L3 — Design Decisions: Safety not in roadmap, no regional content, no 45+ onboarding

🟢 L4 — Systemic Gaps: Audits shallow, RBI fines too low, FIR not linked to recovery

🟣 L5 — Root Incentives: Penalties never applied, no enforcement SLA, no cyber insurance

6

HOW MIGHT WE...?

7 HMW questions — shortlisted from 108 ideas across 7 concepts

HMW 1 · HMW create a single API call that freezes funds across all linked banks within 60 seconds of a fraud report?

HMW 2 · HMW give every user a one-tap SOS from the lock screen that works even in panic or low-literacy situations?

HMW 3 · HMW make fraud recovery status live and publicly visible so victims stop calling and banks stay accountable?

HMW 4 · HMW warn users about local scam threats in their dialect before they are targeted?

HMW 5 · HMW make high-value transactions safer for elderly & low-literacy users through voice and traffic-light risk signals?

HMW 6 · HMW give every user a legal 60-second right to retract a payment they were coerced into making?

HMW 7 · HMW restructure fraud helplines like a SOC — with playbooks, peer counsellors, and cross-bank case tracking?

7

TOP IDEAS

Top 3 Quick-Win Ideas — shortlisted from 108 clustered concepts

1 National Fraud Freeze RPC

Highest value ~46Low effort

An NPCI-mandated open API where a single authenticated call from the victim fans out a freeze instruction to every linked PSP simultaneously — with a 60-second SLA defined in RBI master direction. The system issues an idempotent fraud-event ID that replaces FIR paperwork for cases under a defined threshold. One action, all banks, instant protection.

2 One-tap SOS Lock-Screen Trigger

High value ~43Broad reach

A one-tap freeze trigger accessible from the lock screen, Quick Settings, and a short-code voice line — no login needed. Backed by a Family Vault where 1–2 verified contacts (attested via DigiLocker/UMANG) hold digital power of attorney to act on the victim's behalf. Critical for elderly, low-literacy, and panic-state users who cannot navigate menus mid-scam.

3 Fraud-Event ID Replaces FIR Paperwork

High value ~40Victim relief

A digitally auto-generated, shareable fraud-event ID issued at the moment of report — removing the need to physically visit a police station and file an FIR manually. The ID is cross-recognized by banks, the cybercrime portal, and telcos, enabling faster inter-institution coordination. Reduces victim burden from days to seconds.

8

PROTOTYPE / FLOW DIAGRAM

Our idea is to create a **digital Fraud-Event ID system** that instantly generates a unique fraud case ID as soon as a victim reports cyber fraud through the app or portal.

Instead of visiting a police station and filing paperwork manually, the victim gets a shareable digital ID within seconds.

Features include:

▸ TrustGuard secure reporting platform

▸ 256-bit encrypted security system

▸ Incident/Fraud reporting form

▸ Instant Fraud-Event ID generation

▸ Full legal name input field

▸ Contact override (email/phone) field

▸ Incident date selection with calendar picker

▸ Fraud category dropdown selection

▸ Brief fraud description text area

▸ Secure digital complaint submission

▸ Trackable fraud case generation

▸ Authority and bank sharing support

▸ Manual paperwork bypass system

▸ Simple user-friendly interface

▸ Centralized fraud reporting dashboard

TrustGuard

256-BIT ENCRYPTED

Report an Incident

Bypass manual paperwork. Generate a secure, trackable Fraud-Event ID instantly to share with authorities and banks.

Full Legal Name

e.g. Jane Doe

Contact Override (Email/Phone)

name@domain.com

Date of Incident

dd-mm-yyyy

Category of Fraud
